Typography

Meet our new typeface: Ember Modern Display. Clean, coherent, and distinctly Amazon.

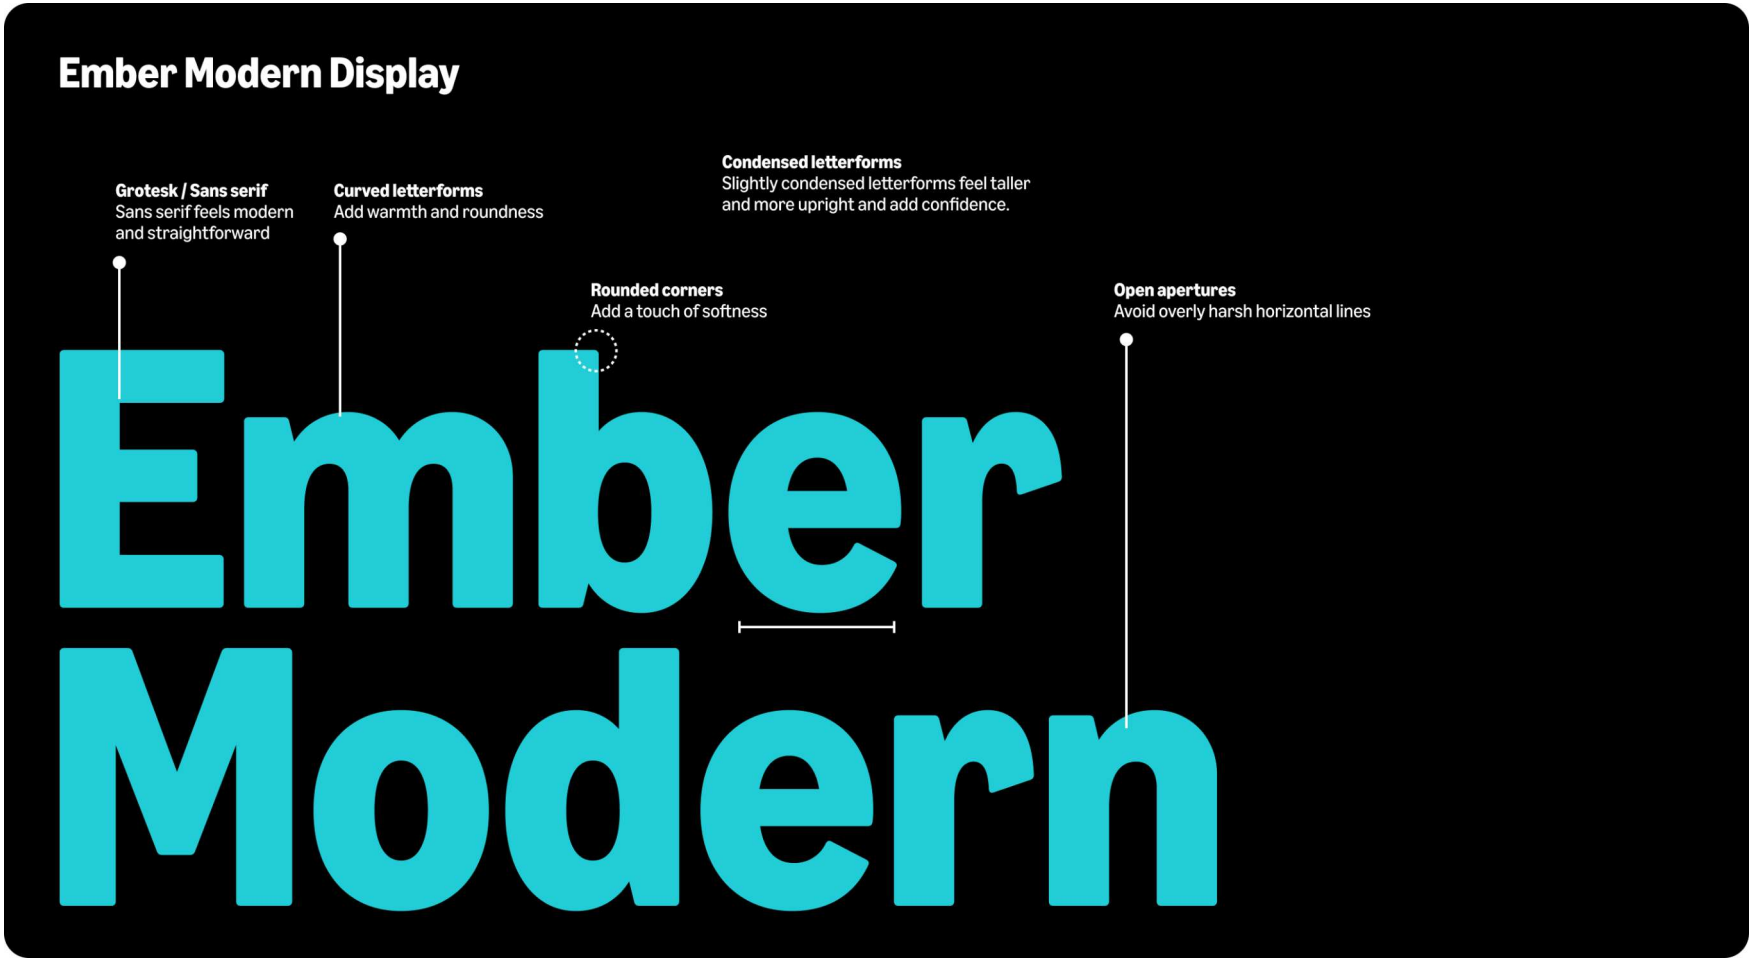

Typeface

This dynamic new typeface drives more expressive, streamlined, and ownable typography across our brand. Ember Modern Display represents our brand personality: clean, simple lines feel authentic and welcoming, while rounder letterforms and angled terminals are inventive and deliver our brand wink.

Ember Modern Display has two weights: Bold for headlines and Regular for subheads and calls to action (CTAs).

We'll continue to use our Amazon Ember typeface exclusively for body copy, long lines of headline copy at smaller sizes, and copy outside of marketing creative. For UX typography guidance, please refer to Rio's Typography Guidelines.

We are currently developing an Ember Modern Text typeface, so check back for continued updates to typography guidelines.

Ember Modern Display
Grotesk / Sans serif
Sans serif feels modern and straightforward
Curved letterforms
Add warmth and roundness
Condensed letterforms
Slightly condensed letterforms feel taller and more upright and add confidence.
Rounded corners
Add a touch of softness
Open apertures
Avoid overly harsh horizontal lines

Hierarchy & Specs

Three type styles—Ember Modern Display Bold, Ember Modern Display Regular, and Amazon Ember Display Regular—are used to express our brand voice. The size relationship of headlines and subheads depends on the layout, and ranges from .3x to .7x of the headline size.

Headlines

Ember Modern Display Bold
Setting: Sentence case | Leading: 90% | Tracking: 0%

From Jelly Roll to the Rolling Stones.

Sub-heads

Ember Modern Display Regular
Setting: Sentence case | Leading: 100% | Tracking: 0%

100 million songs ad-free.

CTA (Call to action)

Ember Modern Display Regular
Setting: Sentence case | Leading: 100% | Tracking: 0%

Type & Color

Our brand has three primary colors for our type and background combinations: Entertainment Dark, Music Cyan, and white. These are the only approved colorways for Ember Modern usage.

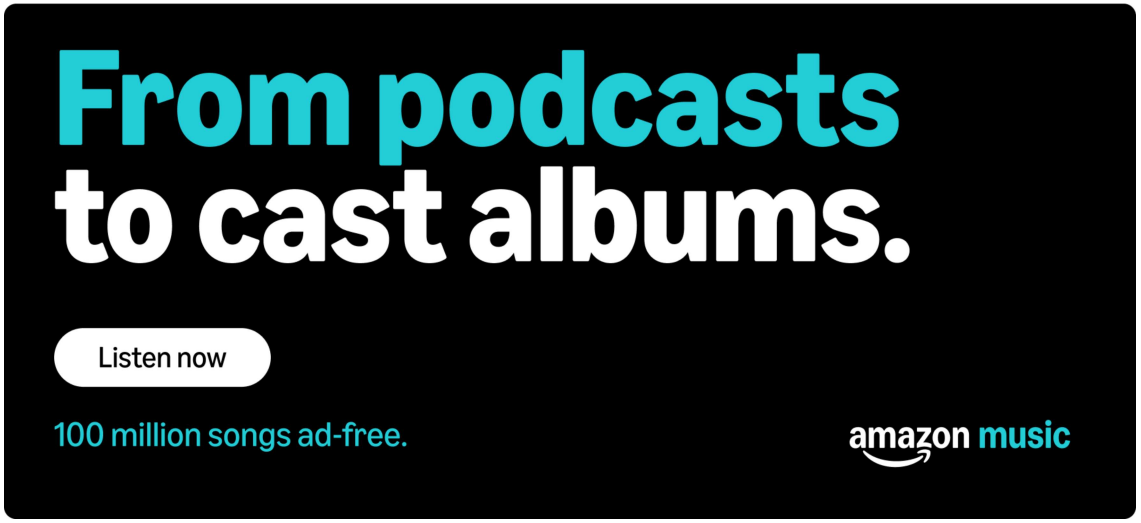

Music Cyan background

When Music Cyan is the background color, place type in Entertainment Dark only. CTAs on Music Cyan are solid white and use Entertainment Dark text.

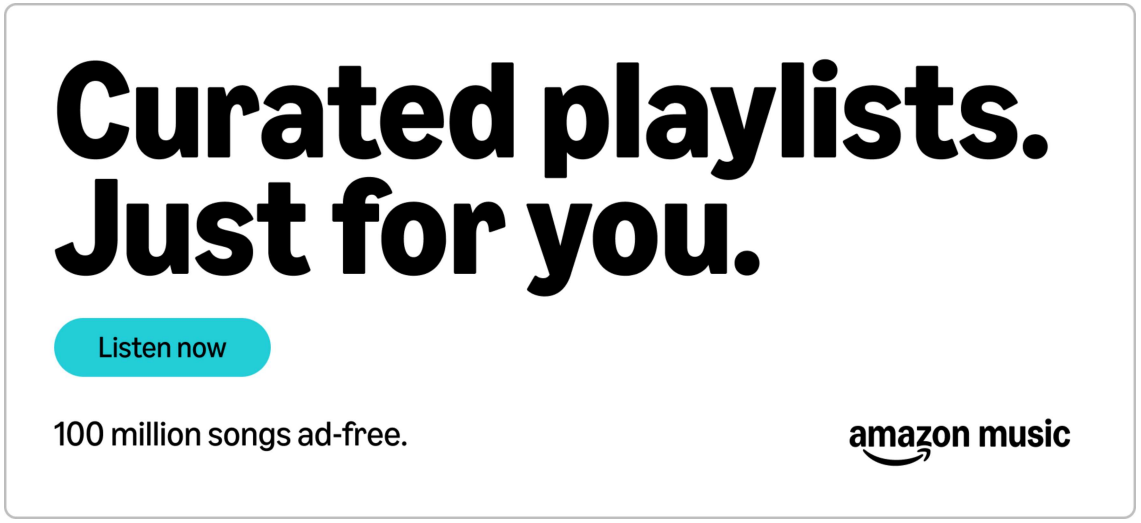

Entertainment Dark background

When Entertainment Dark is the background color, place type in white, Music Cyan, or in both colors. CTAs on Entertainment Dark are solid white with Entertainment Dark text.

White background

When white is the background color, place type in Entertainment Dark. CTAs on white are Cyan with Entertainment Dark text.

DO use Entertainment Dark on Music Cyan

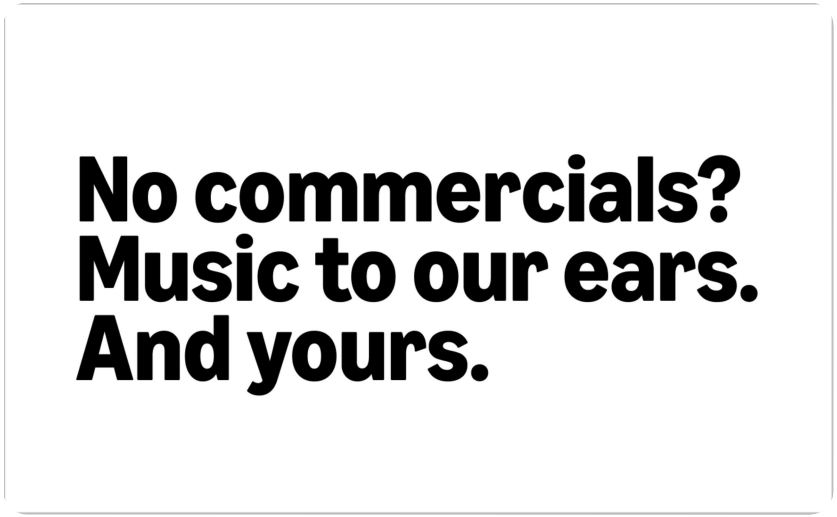

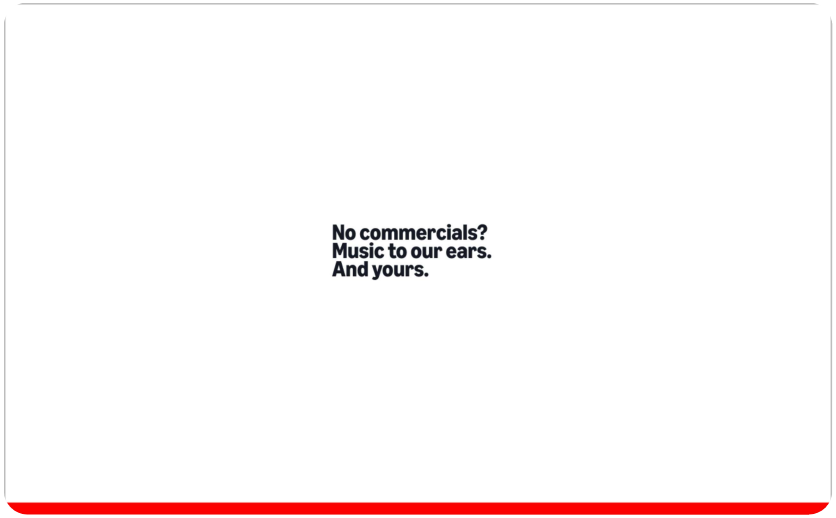

DON'T use white on Music Cyan at any size as it doesn't meet accessibility standards.

Scale

Because it's so strong and expressive, Ember Modern Bold is best when scaled up for short, benefit-driven headlines.

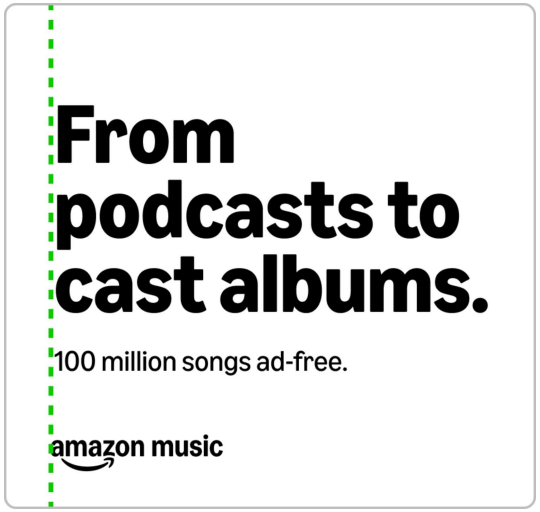

Don’t use Ember Modern Bold when headlines are smaller than 18px. Depending on the use case, instead consider using Amazon Ember or Ember Modern Regular, while defining a clear typographic hierarchy.

Alignment

Use alignment to organize words for balance and structure, and to connect words for legible outcomes. When visual copy is aligned, compositions appear clear and elegant and convey confidence and trust.

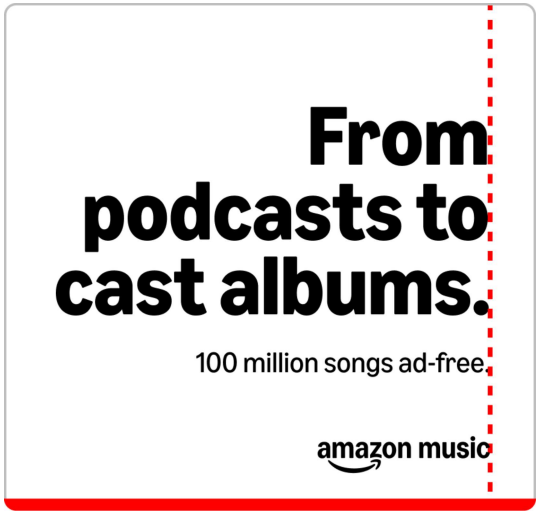

Left Aligned

This is the preferred alignment method for type-driven layouts.

Centered

This method can be used if it works better in a layout than left-aligned.

Right Aligned

Do NOT use this alignment method.

Tracking

Tracking refers to the consistent degree of space between letters. Correct tracking improves readability and helps the eye more easily process letters and words. Universal tracking for Ember Display Modern Display in Bold and Regular weights is +1%. Different tracking may be necessary for certain placements. Sign up for Office Hours to discuss an exception.

✓ Ember Modern Display is designed with optimal tracking. Keep the tracking to +1% to ensure comfortable space

✗ **DON'T** bunch letters together. Tracking less than +1% decreases legibility.

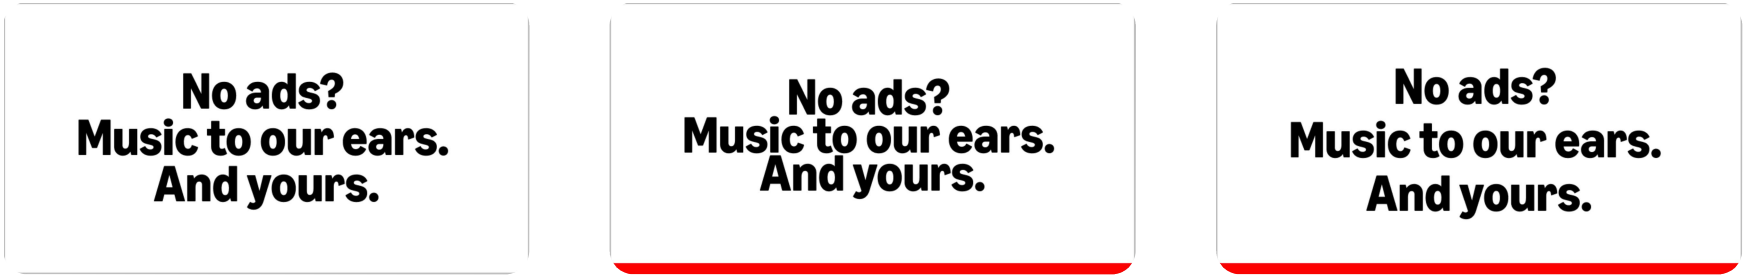

✗ **DON'T** give letters too much space. Tracking more than +1% decreases legibility.

Leading

Leading is the spacing between lines of type. Leading set correctly increases legibility.

The correct leading is 100%, or the same size as the font in use, no matter the font's size or how large or small it scales. This measure works best and is the default setting in all Adobe software.

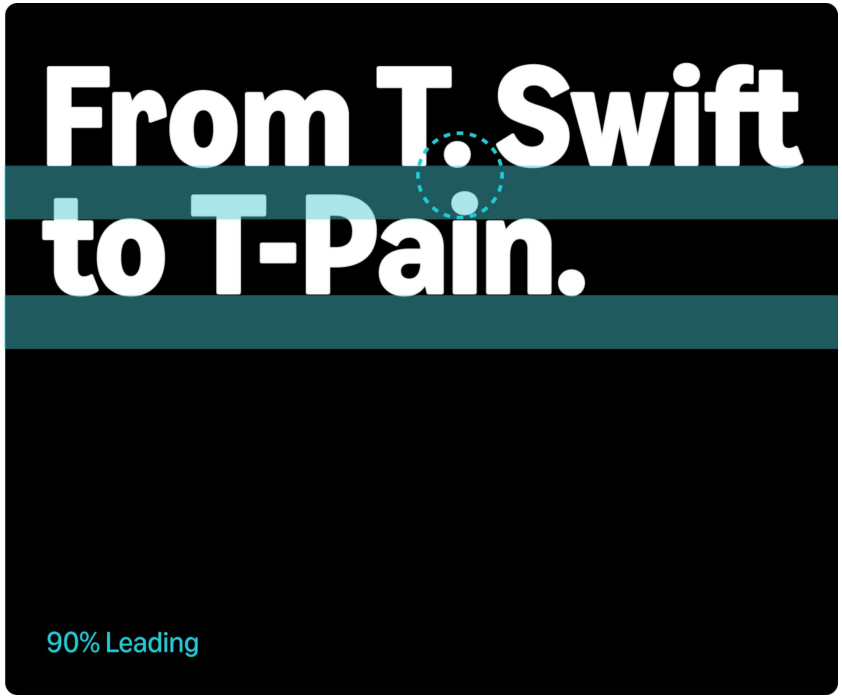

To meet accessibility standards, a setting of 1.5 for spacing between lines is recommended.

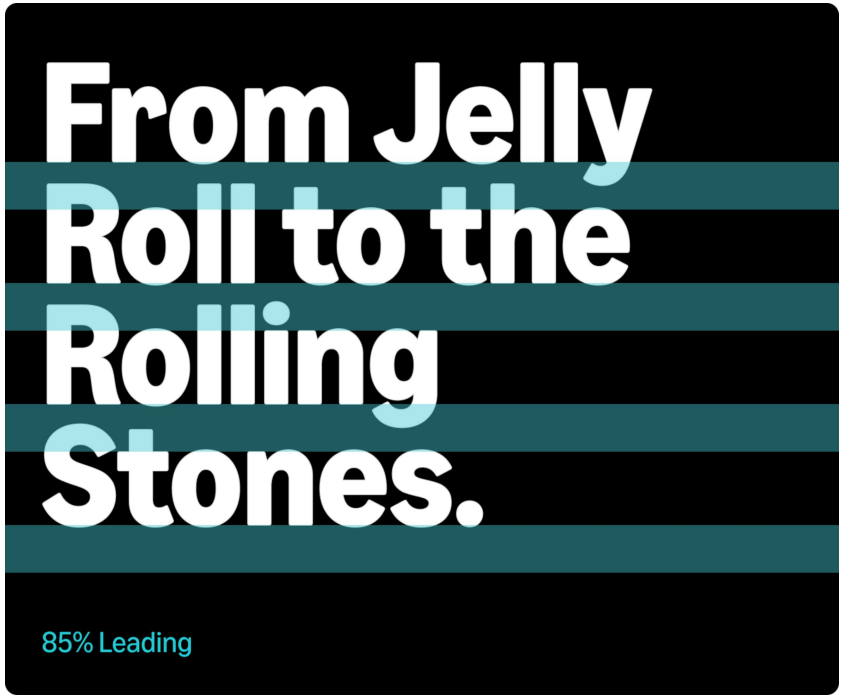

DO give enough space for each line of text to “breathe” and not feel disconnected.

DON’T bunch together letters from multiple lines, making it difficult to read.

DON’T space lines too far apart, making it difficult to read.

Recommended Leading

This leading will work in most scenarios, allowing enough space so that ascenders and descenders don’t clash.

Custom Leading

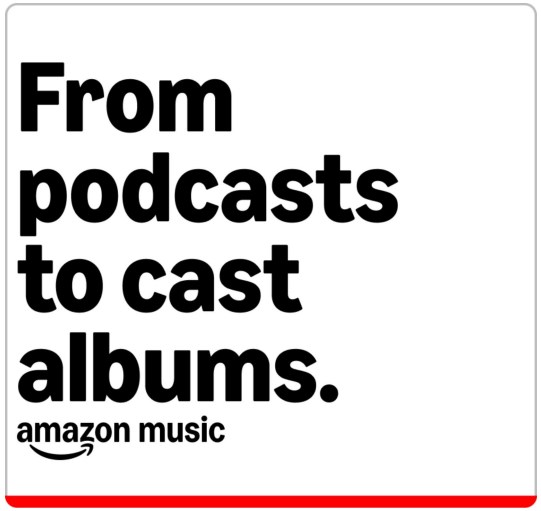

However, the recommended leading of 90% may feel slightly loose on lines without ascenders and descenders. These lines should be set to 80%–90%.

Margins

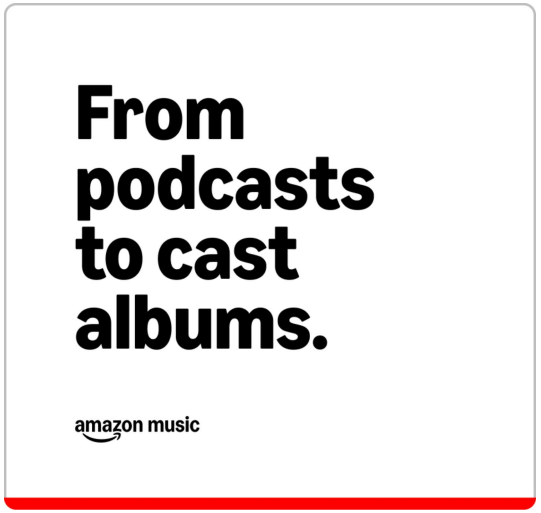

A margin is the space between the edge of the frame and the content within the frame. Consistent margins help pieces feel uniform.

DO give a comfortable amount of space as a margin.

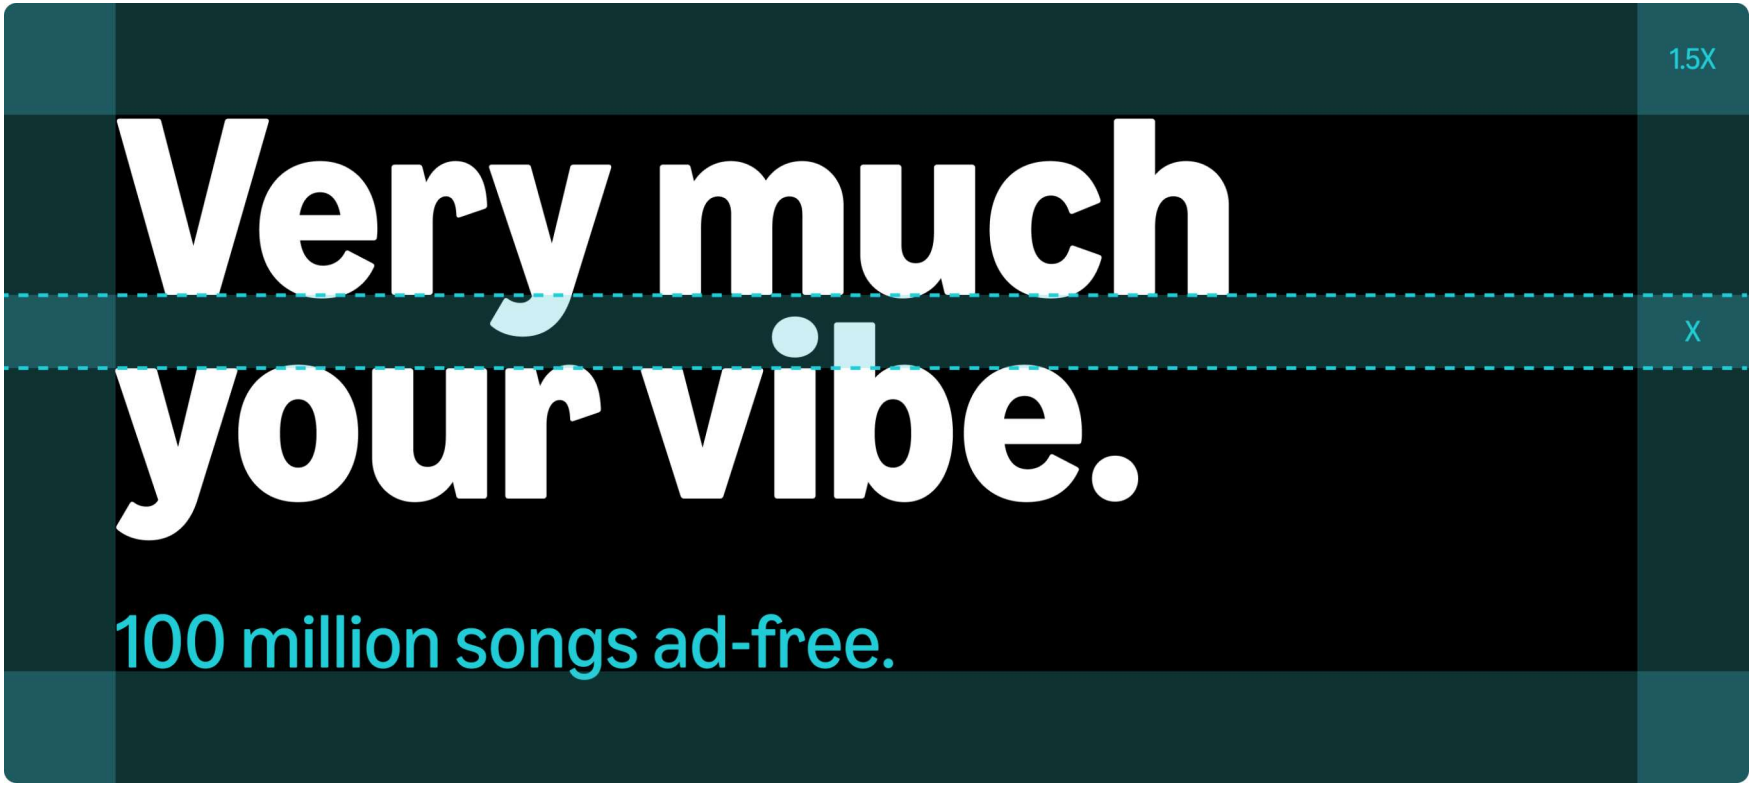

DON‘T make margins too tight or uncomfortably close to the edge.

DON’T make margins too large and “floaty.”

Determining the margin

As a general rule of thumb, the margin should be roughly equivalent to 1.5 times the the space between lines of copy.

Headline Breaks

Where to break

There‘s no perfect rule for where to break lines. Apply all of the following best practices—and know when to make exceptions.

Word hang and punctuation

When a pair of copy lines are similar in length, it’s recommended to break the text before an article (a, an, the), before a preposition (of, on, for), before a short word, or after mid-sentence punctuation to avoid awkward line breaks.

Conditions of Use Privacy Notice © 1996-2026, Amazon.com, Inc. or its affiliates

Keep names together

Always keep proper nouns intact on the same line. In this example, “Dot” is left hanging on the top line, but the name stays intact.

Avoid hyphen breaks

Create a line break before a long word to avoid hyphenation. This creates an easier read, especially for headlines.

Avoid widows

A widow is when the last word sits alone on a line, creating excessive emphasis on that word. Fixing widows is essential for body copy and headlines.

Accessibility

Typefaces are key to creating accessible visual reading experiences. It's of paramount importance that we treat our typefaces in ways that enhance legibility and readability for people with poor vision, learning disabilities, aphasia,

dyslexia, or low levels of literacy.

Copy should not fall below 12 pt/16 px. When space allows, it is preferable to use 14 pt/18 px as a minimum copy size. Print type sizes may fall below 12 pt depending on the application.

For leading, multiply the x-height value by 120% for body copy. For headlines, leading should be set at 110%.

Language Support

We are still developing our type system in alternate languages. Please check back frequently for updates.
