How to:
Install Ember Modern on Mac

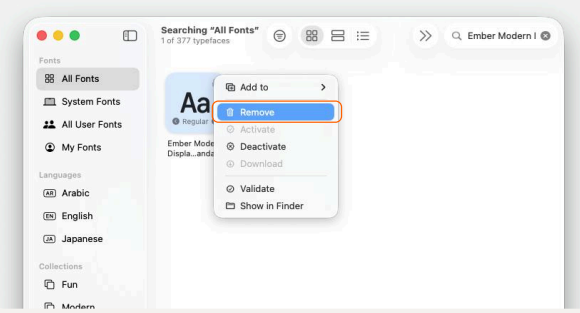

Step 1:
Open Font Book

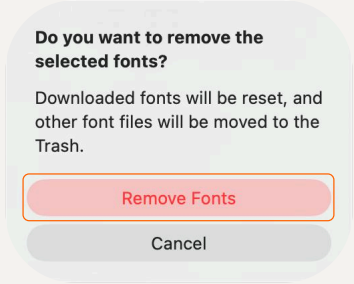

Step 2:
Confirm that you have no outdated font files already installed by searching for “Ember Modern Display” in the Font Book search bar.

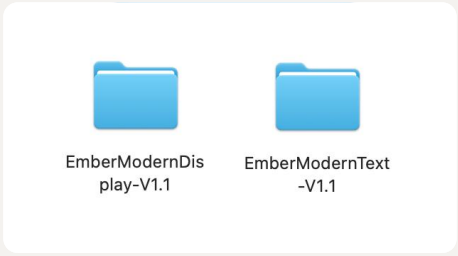

Step 3:
If any fonts labeled “Ember Modern Display” appear in this window, select fonts, right click and press “Remove” If there’s nothing here, proceed to step 5.

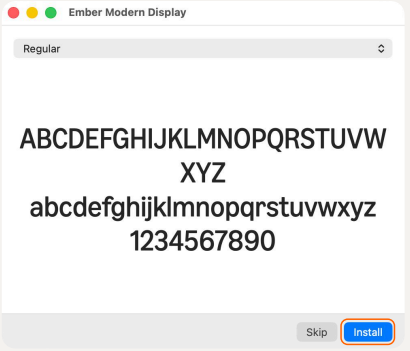

Step 4:
Press “Remove Fonts”

Step 5:
Download the latest font files provided on the portal. The files should be labeled 1.1

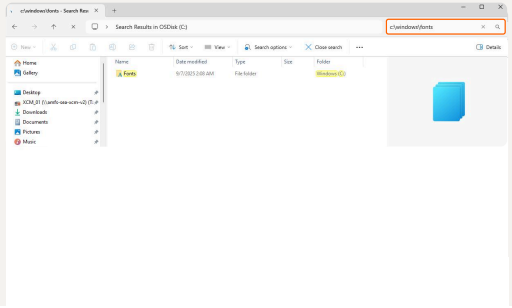

Step 6:
Open and install both Display and Text fonts.

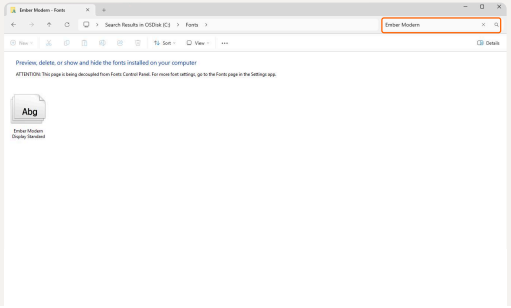

How to:
Install Ember Modern on PC

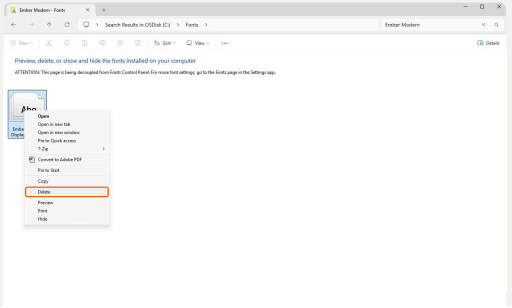

Step 1:
Open File Explorer and search C:\windows\Fonts

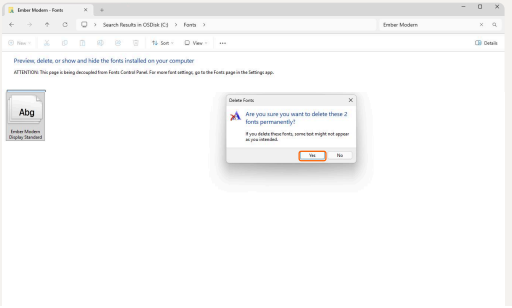

Step 2:
Confirm that you have no outdated font files already installed by searching for “Ember Modern” in the search bar.

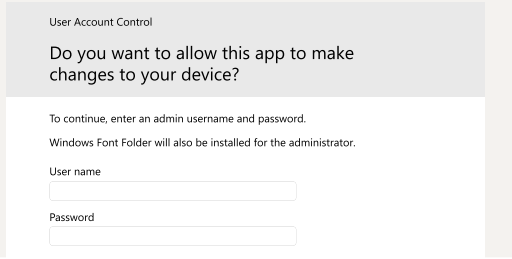

Step 3:
If any old Ember Modern fonts show up in the field, delete them and proceed to Step 4. If the field is empty proceed to Step 6.

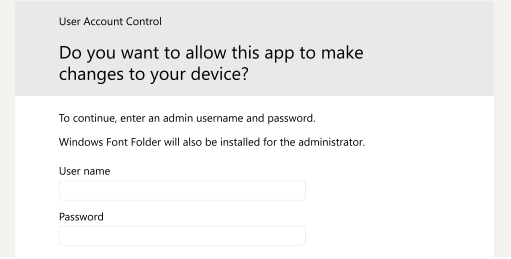

Step 4:
If prompted, confirm the deletion.

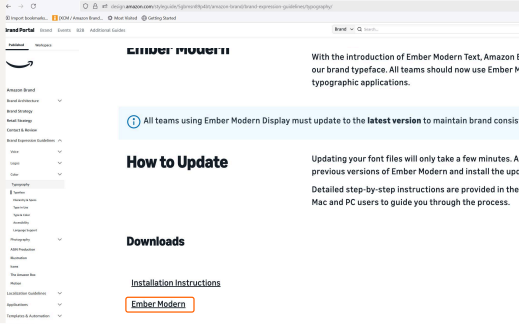

Step 5:
If prompted with the screen below you'll need admin access to continue. To get admin access go to the "^" icon in your taskbar and select the orange ACME icon. Once in ACME, go to Utilities and click on the option to enable admin access.

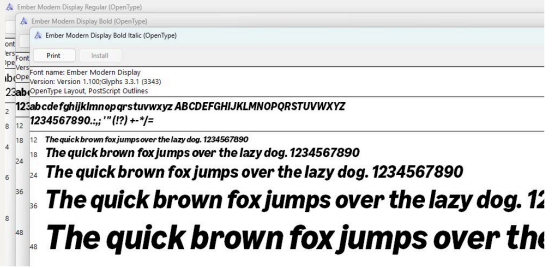

Step 6:
Once you have admin access, right-click to delete the files and enter your alias and log-in password when prompted. The file will then delete.

Step 7:
Download the latest font files provided on the portal. The files should be labeled 1.1

Step 8:
Open the font folder that you just downloaded. Open the EmberModernDisplay folder and select all four fonts. Right-click “Open” and click “Install” on each window pop-up. Complete this step for the EmberModernText folder.

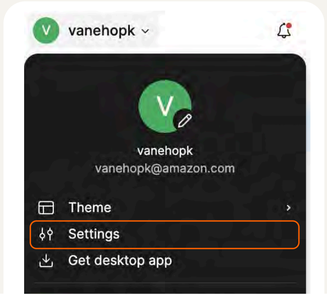

How to:
Populate fonts in Figma

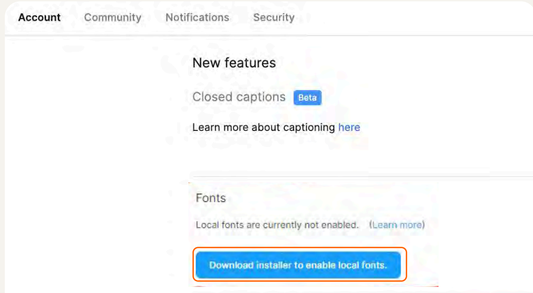

Step 1:
If you're using the Figma desktop app, quit and reopen it to add the new font to your library, then continue to step 4. If you're using Figma in a browser, start at step 2.

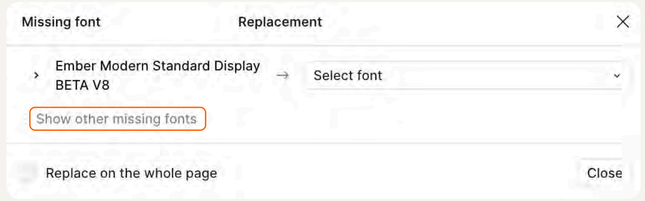

Step 2:
If you are using Figma in the browser window please navigate to the top left corner, click on your account avatar, open “Settings”

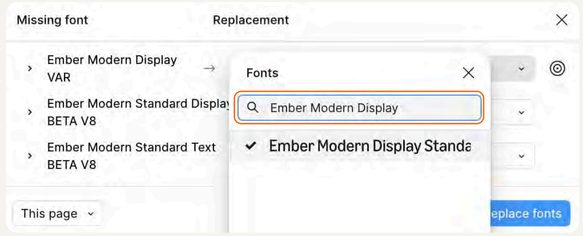

Step 3:
The account window will open, scroll down to fonts. If you see a prompt to download an installer, click download. This will allow newly downloaded fonts to populate in your library.

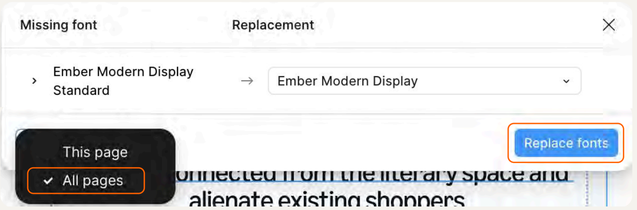

Step 4:
If you are prompted with the window to replace missing fonts when working on files, please click “Show other missing fonts” This window may show outdated versions of Ember Modern.

Step 5:
Click the drop down and type “Ember Modern Display.” Replace all appropriate drop down fields with the latest font.

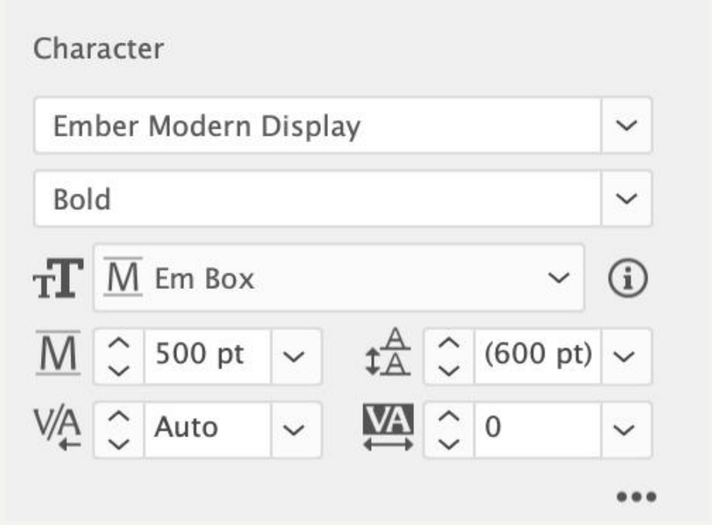

Step 6:
Select “All pages” from the drop down menu in the lower left to update the font in all of the pages within the file. The updated font will appear as “Ember Modern Display”. Once selected, click “Replace fonts.”

How to:
Populate fonts in Canva and all Adobe programs

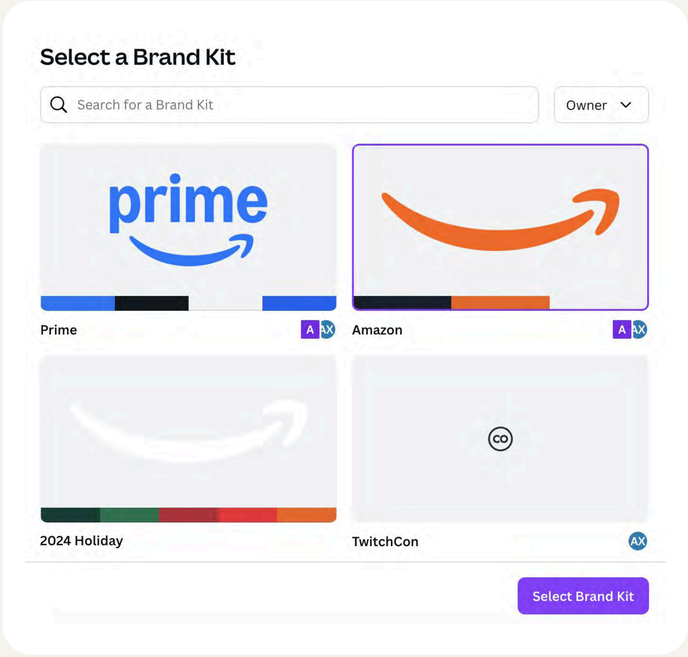

Adobe

Adobe programs will automatically populate fonts once downloaded. Fonts may take a moment or two to populate in the type menu. If its taking more than a few moments, save and restart the program.

Canva

Brand kits will be updated by admin users and new fonts will automatically populate once updated.

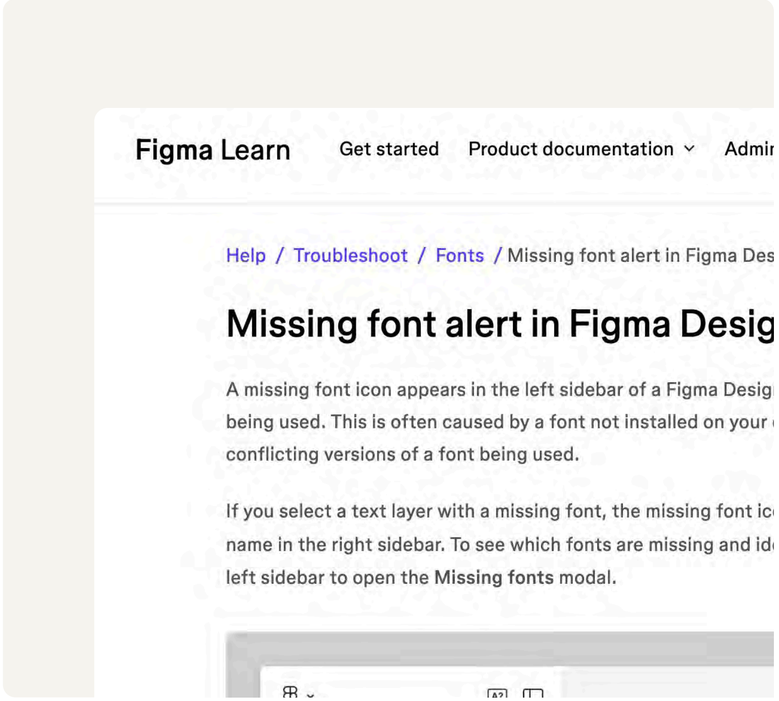

Troubleshooting: Figma, Canva and Adobe

Consult the Figma Learn page

If you have installed the correct fonts and are still getting a missing font alert please visit the Figma Learn page for further troubleshooting information.

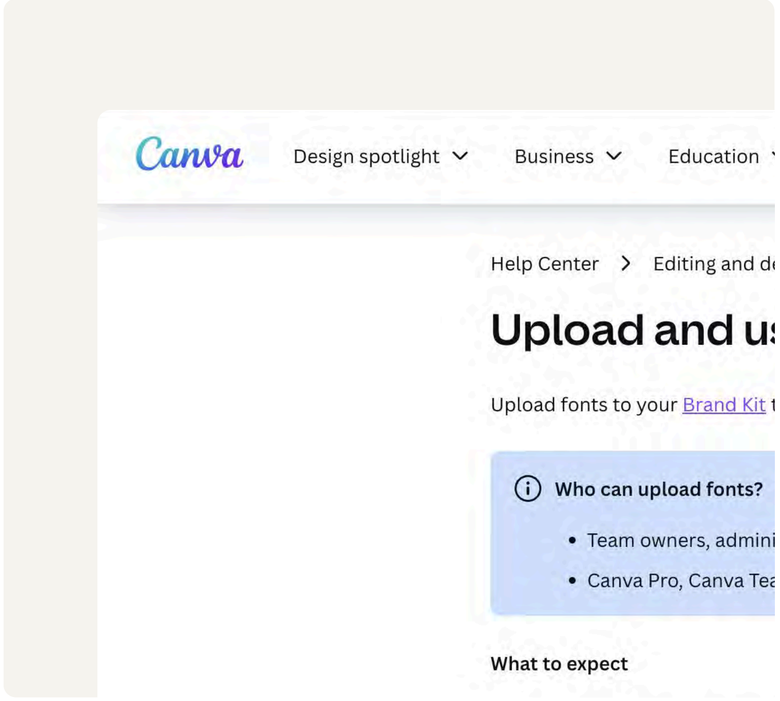

If you are still having issues, please contact us via SIM

Consult the Canva Help page

If the new fonts are not populating in Canva please visit the Canva Help page for further troubleshooting information.

If you are still having issues, please contact us via SIM

Consult the Adobe Support page

If you have installed the correct fonts and they are not populating or you are getting a missing font alert please visit the Adobe Support page for further troubleshooting information.
